

INDEX.

A.

- Acetates and bromacetates of methyl, ethyl, and amyl, relationship between their boiling points, 27.
- Acid acetic, on the action of bromine on it, by W. H. Perkin and B. F. Duppa, 22.
- amylonitrophosphorous, 251.
 - bibromacetic, 28.
 - bromacetic, best mode of preparing it, 22.
 - its action on ammonia, 29.
 - carbonic, estimation of it by means of manganate of potash, 213.
 - preparation of propionic acid by its action on an ethyl-compound, by J. A. Wanklyn, 103.
 - quantity of it in the air of Manchester and its neighbourhood arising from the combustion of coals, 199.
 - dinitroethylic, preparation of, 85.
 - its products of decomposition, 87.
 - glycollic and glycecol, their formation from bromacetic acid, 29, 30.
 - hypochloric, new method of preparing it, by F. C. Calvert, and E. Davies, 193.
 - propionic, its preparation by the action of carbonic acid on an ethyl-compound, by J. A. Wanklyn, 103.
 - rosolic, note on, by Hugo Müller, 1.
 - sulphurous, in smoke from common fires, 232.
- Acidity of the air at Manchester and other localities, 209.
- Acids. distinctions between monobasic and bibasic, 127.
- organic, on a series of them, containing nitrogen, by E. Frankland, 79.
- Aesculin and paviin, distinction between, 18.
- Air of towns, by R. Angus Smith, 196.
- its effect on the blood, 224.
 - its effect on stones, bricks, mortar, etc. 232.
- Alkaloids, on some compounds of iodide and bromide of mercury with the, by T. B. Groves, 97.
- (cinchona) general characters of their iodosulphates, 130.
- Amides and amines, 254.
- Ammonia and its derivatives, by A. W. Hofmann, 252.
- its action on bromacetic acid, 29.
 - its amount in the air of towns, 229.
 - basic derivatives of it, constructed on the water-type, 270.
 - in smoke from common fires, 232.
 - formation of organic bases by the direct substitution of organic radicals for the hydrogen in it, 278, 287.
- Ammonium, bromacetate, 23.
- Amyl, action of nascent hydrogen on its nitrite, 247.
- action of phosphorus upon its nitrite, 250.
 - action of potassium and of chlorine on its nitrite, 248.
 - bromacetate of, 26.
 - contributions to the knowledge of the amyl group, by Frederick Guthrie, 245.
 - nitrite of, 245.
- Amylo-nitrophosphate of potash, 251.
- Analysis, on the use of gas as fuel in organic, by A. W. Hofmann, 30.
- Anniversary meeting (March 30, 1858), 181.
- Antimony, arsenic, nitrogen, and phosphorus bases compared, 76.
- Arrows, remarks on poison obtained from, by H. J. B. Hancock, 104.
- Arseniates of baryta, lime, and magnesia, by F. Field, 6.
- Arseniate of lime and ammonia, 10.
 - of magnesia and ammonia, 12.
- Arsenic, its separation from antimony, 16.
- its separation from other elements, by F. Field, 6.
- Atmopyre, 31.
- Atomic weight of carbon, 129.
 - weights of oxygen and water, by W. Odling, 107.

B.

- Balance-sheet of the Chemical Society (1857-8), 191.
 Ball-soda or black ash, its composition and analysis, by J. W. Kynaston, 155.
 Barium, bibromacetate of, 28.
 — bromacetate of, 23.
 Baryta, arseniate of, 8.
 — dinitroethylate of, 86.
 Bases, comparison between antimony, arsenic, nitrogen, and phosphorus bases, 76.
 — natural organic bases considered as derivatives of ammonia, 265, 267.
 — (organic) their formation by the direct substitution of organic radicals for the hydrogen in ammonia, 278, 287.
 Basic derivatives of ammonia constructed on the water-type, 270.
 Bibasic and monobasic acids, distinctions between, 127.
 Bibromacetates, 28.
 Bichloramyl, nitrite of, 249.
 Bin oxide of nitrogen, action of zincethyl on, 80.
 — action of zincmethyl on, 88.
 Biselenide of triethylphosphine, 71.
 — trimethylphosphine, 74.
 Bisulphide of triethylphosphine, 69.
 — trimethylphosphine, 74.
 Black ash or ball soda, its composition and analysis, by J. W. Kynaston, 155.
 Blood, effects produced upon it by the air of towns, 224.
 Boiling points of the acetates and bromacetates of methyl, ethyl, and amyl, 27.
 Bromacetates, 23-27.
 Bromide of mercury, its compounds with the alkaloids, 97.
 — silicon and hydrogen, 93.
 — triethylphosphine, 69.
 Bromine, its action on acetic acid, by W. H. Perkin and F. B. Duppa, 22.
 Buff and Wöhler, on some new compounds of silicon, 90.

C.

- Cahours and Hofmann, researches on the phosphorus-bases, 56.
 Calcium, bromacetate of, 23.
 Calvert and Davies, on a new method of preparing hypochloric acid or peroxide of chlorine, 193.

- Carbon, its atomic weight, 129.
 — in the air of towns, 230.
 — on the surface of buildings, etc. in large towns, 233.
 Chemical action of water on soluble salts, by J. H. Gladstone, 36.
 Chemical Society. proceedings at its meetings, 50, 181.
 Chloride of ethylene, by A. Wurtz, 96.
 — silicon and hydrogen, 91.
 — chloride of triethylphosphine, 69.
 Chlorine, its action on nitrite of amyl, 248.
 — new method of preparing hypochloric acid or peroxide of chlorine, by F. C. Calvert and E. Davies, 193.
 Cinchona-alkaloids, general characters of their iodosulphates, by W. B. Herapath, 130.
 Cinchonidine, formulæ of, 150.
 Cinchonine, its compound with iodide of mercury, 101.
 Cinnabar, on a peculiar pseudomorph of cinnabar from Pola de Lena, in Asturias, Spain, by Hugo Müller, 240.
 Columbite from Evigtok, in the Fiord of Arksut, in Greenland, 243.
 Copper, bromacetate of, 23.
 — dinitroethylate of, 87.

D.

- Davies and Calvert, on a new method of preparing hypochloric acid or peroxide of chlorine, 193.
 Davy (Edmund), obituary notice of, 184.
 Diamines, 261.
 Diammonium compounds, 271.
 Dinitroethylates, 83-87.
 Dinitromethylates, 89.
 Double salts, chemical action of water on them, 46.
 Duppa and Perkin, on the action of bromine on acetic acid, 22.

E.

- Ether, dinitroethyl, 86.
 Ethyl, bibromacetate of, 29.
 — bromacetate of, 25.
 — preparation of propionic acid by the action of carbonic acid on an ethyl-compound, by J. A. Wanklyn, 103.
 Ethylene, on chloride of, by A. Wurtz, 96.

F.

- Field, F., on the arseniates of baryta, lime, and magnesia, and the separation of arsenic from other elements, 6.
 Frankland, E., on a new series of organic acids containing nitrogen, 79.
 Fraxin compared with paviin, 21.

G.

- Gas, on its use as fuel in organic analysis, by A. W. Hofmann, 30.
 Gladstone, J. H., on the chemical action of water on soluble salts, 36.
 Glyccocol, its formation, from bromacetic acid, 29.
 Gold-salt of tetrethylphosphonium, 66.
 — tetramethylphosphonium, 74.
 Groves, T. B., on some compounds of iodide and bromide of mercury with the alkaloids, 97.
 Guthrie, F., contributions to the knowledge of the amyl-group, 245.

H.

- Hadow, E. A., on the action of oxydizing agents on the sulphocyanides, 174.
 Hancock, H. J. B., some remarks on poison obtained from arrows, 154.
 Herapath, W. B., on the general characters of the iodosulphates of the cinchona alkaloids, 130.
 Hofmann, A. W., on ammonia and its derivatives, 252.
 — on the use of gas as fuel in organic analysis, 30.
 Hofmann and Cahours, researches on the phosphorus-bases, 56.
 Horse-chestnut, on the existence of a second crystallizable fluorescent substance (paviin) in its bark, by G. G. Stokes, 17.
 Hydrated oxide of silicon, 93.
 — tetramethylphosphonium, action of heat on, 74.
 — tetrethylphosphonium, 65.
 — triethylamylphosphonium, action of heat on, 72.
 Hydrogen, action of nascent hydrogen on nitrite of amyl, 247.
 — and silicon, bromide of, 93.
 — in ammonia, its elimination by the action of the bromides, chlorides, and iodides of the alcohol-radicals, 278-287.

VOL. XI.

Hydrogen in ammonia, its elimination by the action of oxygen-compounds of organic radicals, 287.

— and silicon, chloride of, 91.

— iodide of, 93.

Hyposulphites, process for the determination of sulphides, sulphites, hyposulphites, and sulphates, in presence of each other, as adopted in the determination of these salts in soda waste as obtained from black ash, by J. W. Kynaston, 166.

I.

- Iodide of mercury, its compounds with the alkaloids, 97.
 — methyltriethylphosphonium, 71.
 — tetramethylphosphonium, 74.
 Iodo-cinchonine, sulphate of, 151.
 Iodo-cinchonidine, sulphate of, 143.
 Iodo-quinidine, preparation of its sulphate, 139.
 — sulphate of, 140.
 Iodo-sulphate of quinine, 133.
 Iodo-sulphates of the cinchona alkaloids, their general characters, by W. B. Herapath, 130.
 Iodide of triethylphosphine, 69.
 — tetrethylphosphonium, 64.
 — triethylamylphosphonium, 71.
 — trimethylamylphosphonium, 75.
 — trimethylethylphosphonium, 75.
 Iron (meteoric) from Zacatecas, in Mexico, analysed by Hugo Müller, 236.

K.

- Kynaston, J. W., on the composition and analysis of black ash or ball soda, 155.
 — process for the quantitative estimation of sulphides, sulphites, hyposulphites, and sulphates in presence of each other, as adopted in the determination of these salts in "soda waste," as obtained from black ash, 166.

L.

- Lead, bibromacetate of, 28.
 — bromacetate of, 24.
 Liebethenite from Congo, in Portuguese Africa, by Hugo Müller, 242.
 Liebig, J., extract of a letter from, to Dr. Daubeny, on some properties of soils, 53.

2 E

- Lime, its effect in diminishing the amount of sulphur evolved in the distillation of coal, 234.
 — dinitroethylate of, 87.
 — and ammonia, arseniate of, 10.

M.

- Macvicar, J. G., notice of another new maximum and maximum mercurial thermometer, 106.
 Magnesia, dinitroethylate of, 87.
 — and ammonia, arseniate of, 12.
 Mercury, on some compounds of its iodide and bromide with the alkaloids, by T. B. Groves, 97.
 Metallamines, 302.
 Metallic deposits in chimneys of reverberatory furnaces used for melting alloys of silver with copper and with gold, by J. Napier, 168.
 Meteoric iron from Zacatecas in Mexico, analysed by Hugo Müller, 236.
 Methyl, bromacetate of, 25.
 Methyltriethylphosphonium, iodide of, 71.
 Mineralogical contributions, by Hugo Müller, 236.
 Monamines, primary, 255.
 — secondary, 258.
 — tertiary, 259.
 Monobasic and bibasic acids, distinctions between, 127.
 Morphine, its compound with iodide of mercury, 99.
 Müller, H., mineralogical contributions, 236.
 — note on rosolic acid, 1.

N.

- Napier, J., remarks on metallic deposits found in two chimneys attached to reverberatory furnaces, one being used for melting an alloy of silver and copper, and the other an alloy of silver and gold, 168.
 Nitride of silicon, 95.
 Nitrite of amyl, 245.
 — action of nascent hydrogen upon it, 247.
 — action of potassium and of chlorine upon it, 248.
 — — phosphorus upon it, 250.
 Nitrite of bichloramyl, 249.
 Nitrogen, action of zinc ethyl on its binoxide, 80.
 — — zinemethyl on its binoxide, 88.

- Nitrogen, on a series of organic acids containing it, by E. Frankland, 79.
 — phosphorus, arsenic and antimony bases compared, 76.

O.

- Odling, W., on the atomic weights of oxygen and water, 107.
 Obituary notice of Professor Edmund Davy, 184.
 — — Baron Thénard, 182.
 Organic acids, on a series of them containing nitrogen, by E. Frankland, 79.
 — analysis, on the use of gas as fuel in, by A. W. Hofmann, 30.
 — bases, their formation by the direct substitution of organic radicals for the hydrogen in ammonia, 278, 287.
 — — their formation by the reduction of nitro-compounds, 290.
 — — by the decomposition of nitrogenous substance, 293.
 — matter, estimation of it by means of manganate and permanganate of potash, 217.
 Oxide of silicon, hydrated, 93.
 Oxidizing agents, their action on sulphocyanides, by E. A. Hadow, 174.
 Oxygen, its amount in the air of towns, 228.
 — and water, on the atomic weights of, by W. Odling, 107.
 Oxone in the air at Manchester and other localities, 209.

P.

- Pavin, a second crystallizable fluorescent substance in the bark of the horse-chestnut, by G. G. Stokes, 17.
 Pentamines, 268.
 Perkin and Duppa, on the action of bromine on acetic acid, 22.
 Peroxide of chlorine, new method of preparing it, by F. C. Calvert and E. Davies, 193.
 Phosphorus, action of its terchloride on zinc-ethyl, 59.
 — its action on nitrite of amyl, 250.
 — nitrogen, arsenic and antimony bases compared, 76.
 — bases, researches on them, by A. W. Hofmann and A. Cahours, 56.
 Platinum-salt of tetramethylphosphonium, 74.
 — — trimethylamylphosphonium, 75.
 — — trimethylethylphosphonium, 75.
 — — trimethylphosphine, 73.

- Platinum-salt of tetrethylphosphonium, 66.
 Poison obtained from arrows, some remarks on it, by H. J. B. Hancock, 154.
 Potash, amylonitrophosphite of, 251.
 Potassium, bromacetate of, 23.
 — its action on nitrite of amyl, 248.
 President's report, 181.
 Proceedings at the meetings of the Chemical Society, 50, 181.

Q.

- Quinine, its compound with iodide of mercury, 100.
 — iodosulphate of, 133.

R.

- Radicals (organic), formation of organic bases by the direct substitution of them for the hydrogen in ammonia, 278, 287.
 Rain, impurities in it at Manchester and its neighbourhood, 212.
 Report of the President and Council of the Chemical Society, 181.
 — of the Treasurer of the Chemical Society, 191.

S.

- Salt (common), its influence on the amount of sulphur evolved from coal by distillation, 235.
 Salts on the chemical action of water on soluble, by J. H. Gladstone, 36.
 Silicon and hydrogen, bromide of, 93.
 — — chloride of, 91.
 — — iodide of, 93.
 — hydrated oxide of, 93.
 — nitride of, 95.
 — on some new compounds of, by F. Wöhler and H. Buff, 90.
 Siliciuretted hydrogen, 90.
 Silver, bibromacetate of, 28.
 — bromacetate of, 25.
 — dinitroethylate of, 87.
 Smith, R. A., on the air of towns, 196.
 Smoke from common fires, ammonia and sulphurous acid contained in it, 232.
 Soda, composition and analysis of black ash or ball soda, by J. W. Kynaston, 155.
 — dinitroethylate of, 87.

- Soda, dinitromethylate of, 89.
 Soda-waste, determination of sulphides, sulphites, hyposulphites and sulphates in "soda-waste" as obtained from "black wash," by J. W. Kynaston, 166.
 Sodium, bromacetate of, 23.
 Sodium-ethyl, action of carbonic acid on, 103.
 — preparation of, 103.
 Soils, on some properties of, by J. Liebig, 53.
 Stokes, G. G., on the existence of a second crystallizable fluorescent substance (paviin) in the bark of the horse-chestnut, 17.
 Strychnine, its compound with iodide of mercury, 100.
 Sulphate of iodo-cinchonidine, 143.
 — of iodo-cinchonine, 151.
 — of iodo-quinidine, 140.
 Sulphides, process for the quantitative determination of sulphides, sulphites, hyposulphites and sulphates in presence of each other, as adopted in the determination of these salts in "soda waste," as obtained from "black ash," by J. W. Kynaston, 166.
 Sulphocyanides, action of oxidizing agents upon them, by E. A. Hadow, 174.
 Sulphur, amount of it in coals used in Manchester, 206.
 — influence of lime and common-salt in diminishing the amount of sulphur evolved from coal by distillation, 215.
 — acids in the air of Manchester, 206.

T.

- Tarry matters in the air of towns, 231.
 Terechloride of phosphorus, its action on zinc-ethyl, 59.
 Tetramethylphosphonium, action of heat on its hydrated oxide, 74.
 — gold and platinum-salts of, 74.
 — iodide of, 74.
 Tetramines, 268.
 Tetrethylphosphonium, action of heat upon its oxide, 66.
 — gold and platinum-salts of, 66.
 — hydrated oxide of, 65.
 — iodide of, 64.
 Thénard (Baron), obituary notice of, 182.
 Thermometer, notice of a new maximum and minimum mercurial thermometer, by J. G. Macvicar, 106.

Towns, on the air of, by R. Angus Smith, 196.
 Treasurer's report, 191.
 Triamines, 267.
 Triammonium-compounds, 271.
 Triethylamylphosphonium, iodide of, 71.
 Triethylphosphine, 61.
 — biselenide of, 71.
 — bisulphide of, 69.
 — chloride, bromide and iodide of, 69.
 Triethylamylphosphonium, action of heat on its hydrated oxide of, 72.
 — platinum-salt of, 75.
 Trimethylethylphosphonium, iodide of, 75.
 — platinum-salt of, 75.
 Trimethylphosphine, 73.
 — binoxide, bisulphide and biselenide of, 75.

U.

Ureas considered as diamines, 262.

W.

Wanklyn, J. A., on a new mode of preparing propionic acid, viz., by the

action of carbonic acid on an ethyl-compound, 103.
 Water and oxygen, on the atomic weights of, by W. Odling, 107.
 — its chemical action on soluble salts, by J. H. Gladstone, 36.
 — type, basic derivatives of ammonia constructed on it, 270.
 Wöhler and Buff, on some new compounds of silicon, 90.
 Wurtz, A., on chloride of ethylene, 96.

Z.

Zinc, dinitroethylate of, 84.
 — — and zinc-ethyl, 83.
 — dinitromethylate of, 89.
 Zincethyl, its action on binoxide of nitrogen, 80.
 — — action of terchloride of phosphorus on it, 59.
 Zincmethyl, its action on binoxide of nitrogen, 88.

END OF VOL. XI.
